COMMENT

Only inaugurated in 2010 it is considered quite a technical and rather demanding track for brakes since, especially in the first part of the track, it does not allow the braking systems to cool properly. Despite the most demanding cut out is on Curve 16 where the motorcycles undergo a deceleration of close to -1.5 g, the most critical part is the mixed one where the sequence of smaller cut outs close together can put the brakes into crisis.

* Turn 16 is considered the most demanding for the braking system.
